

Local Industrialization of the Hélios Solar Tracker with Exergetica

Exergetica offers the **Hélios solar tracker** under a **licensing model based on our patents**.

With this approach, we make it possible for partners worldwide to establish **local manufacturing capabilities** for a product that has already been validated on the market.

Our goal is simple: **bring production closer to demand.**

By enabling regional partners to manufacture the Hélios tracker directly within their territory, we empower local industries to benefit from a **proven, innovative, and patented technology**, while simultaneously reducing logistics costs, strengthening regional know-how, and creating new industrial jobs.

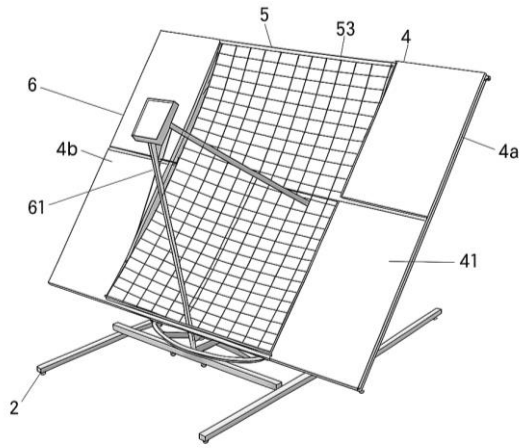

What Exergetica Provides

We provide a **comprehensive framework** to help our partners achieve local industrialization:

- **Full Production Plans and Documentation**
Every detail needed to manufacture the Hélios tracker, from raw materials to final assembly.
- **Technical Support and Training**
Our engineers and technicians will guide your teams throughout the process: setting up the production line, training operators, and ensuring smooth ramp-up.
- **Turnkey Production Containers**
To simplify setup, we deliver **modular production units in containers**, fully equipped with the necessary machinery to fabricate the Hélios tracker. These mobile workshops are dimensioned according to your production capacity — whether you aim for small-scale or large-scale deployment.
- **Adaptability to Your Market**
Facilities and processes are scaled to your production needs, ensuring flexibility as your market grows.

This model guarantees **fast and efficient deployment**, even in regions where industrial infrastructure is limited.

Why Local Industrialization Matters

Local manufacturing of the Hélios tracker delivers **multiple benefits** for our partners:

- **Lower Logistics Costs:** Produce and deliver directly in your market, eliminating costly international shipping.
- **Regional Value Creation:** Generate local employment and industrial expertise.
- **Sustainability:** Reduce the environmental impact of transportation and packaging.
- **Energy Sovereignty:** Empower communities and businesses with their own renewable energy solutions.

👉 By joining the **Hélios partner network**, you actively contribute to the **democratization of solar energy**, using a **trusted and patented technology** already recognized for its efficiency.

Produce Your Own Hélios Solar Tracker with Exergetica

Are you looking to **manufacture your own solar trackers locally**? With Exergetica, it's possible. Through our licensing opportunities, you gain access to a **field-proven design** combined with our **patent portfolio**, ensuring you benefit from a solid technological foundation while focusing on your local market.

Our Support at Every Step

- **Engineering Guidance:** From site layout to production line design.
- **Technical Assistance:** Hands-on support for installing machinery and training staff.
- **Scalable Production:** Start small and scale up according to demand, without unnecessary upfront investments.
- **Modular Tools:** Production-ready equipment and industrial kits tailored to the Hélios tracker.

With this complete package, you can **launch your production within months** and address your market with a **competitive and innovative solar tracking system**.
